

DELTA – MPIS Water Treatment  
Technology:  
**Application in Horticultural Use**

DELTA – MPIS offers an **innovative, tunable water deionization technology** that is designed to remove dissolved salts from water sources without any chemicals

- The tunability feature allows **each crop** their own **salinity** and **mineral levels**

*Our systems offer water production of up to **28 m<sup>3</sup>/h***

- The technology is capable of **treating all water sources** for irrigation in horticulture, such as **well** and **ground water**
- The water treatment systems incorporate **fully automated self-cleaning** with **dynamic control** ensuring the water produced is of **consistent high quality**, adjusting to varying concentration of feed water constituents

-  Technological Park of Lefkippos, Neapoleos and Patriarchou Grigoriou, Aghia Paraskevi Attikis, Athens, 15310
